CO_2 Room Sensor, BAPI-Stat "Quantum Prime"

Air Quality Sensors

Rev. 03/11/24

Features & Options

- Automatic Barometric Pressure Compensation for Accurate Readings Regardless of Weather or Altitude
- Optional Temperature, Setpoint, Override and Humidity
- Optimized for Continuously Occupied Areas
- Models that Meet California AB 841 When Connected to a Building Automation System (choose option N when ordering)

The BAPI CO_2 Sensor is an accurate and reliable way of incorporating demand controlled ventilation into a building's HVAC strategy. It measures the CO_2 in a range of 0 to 2,000 ppm with a field selectable output of 0 to 5 or 0 to 10 VDC.

BAPI's Dual Channel "24/7" unit has been optimized for continuously occupied areas and features a 3-point calibration process for enhanced accuracy and stability.

Barometric pressure changes can affect CO_2 sensors, even putting them outside of their specified accuracy. The BAPI unit has a built-in Barometric pressure sensor that continuously compensates the output for accurate readings despite the weather or altitude.

The CO_2 level is indicated by three LEDs on the front of the unit. A 60mm mounting base is available to fit European style junction boxes.
