

BAPI can supply 20K-2 and 20K-3 thermistor sensors. These thermistors are exactly twice the resistance of the 10K-2 and 10K-3 thermistors throughout the temperature range of 32°F to 158°F (0°C to 70°C). They also have the accuracy specification of  $\pm 0.2^\circ\text{C}$  over that temperature range.

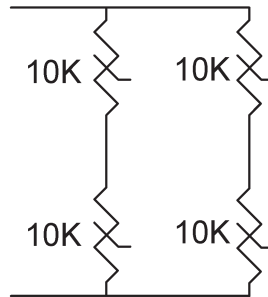

If an average temperature of a large space such as a ballroom or auditorium is required, the 20K sensors can allow very flexible positioning of multiple sensors while giving the same resistance as a 10K thermistor. Several applications are shown below.
