

Features & Options

- Built in or remote temperature sensor
- Onboard memory and user adjustable settings
- Transmits to a digital Gateway or a wireless-to-analog Receiver

The BAPI-Stat "Quantum Slim" Wireless Sensor measures the temperature and transmits the data via Bluetooth Low Energy to a receiver or gateway. It is designed to monitor temperature inside refrigerator and freezer cases. The unit mounts on the outside of freezers and can be mounted either inside or outside of refrigerators. It is available with an internal or an external sensor.

The external sensor's cable fits between the door seal or through a hole without affecting appliance efficiency.

BAPI-Stat "Quantum Slim"

*In-building range is dependent on obstructions such as furniture and walls and the density of those materials. In wide open spaces, the distance may be greater; in dense spaces, the distance may be less.

**Actual battery life is dependent on the sensor's adjustable settings and environmental conditions.

***The available transmit intervals and sample intervals are different depending on whether the system is using a gateway or a receiver.

Door Switch Magnet Accessory

The Door Switch Magnet works with BAPI’s Wireless “Quantum Slim” sensor to monitor the status of doors, including refrigerators, freezers, outside doors and garbage gates. The pickup for the Door Switch Magnet is already mounted inside all of the BAPI-Stat “Quantum Slim” units.

The magnet works with all “Quantum Slim” units including those with a remote probe or thermobuffer.

Note: Use only the BAPI Door Switch Magnet. Other magnets may damage the sensor or affect the accuracy of the sensor.

Associated Receiver and Gateway

Receiver (Wireless-to-Analog) - Receives the data from one or more wireless sensors. The data is then transferred to the Analog Output Modules and converted to an analog voltage or resistance.

Gateway - Receives the data from one or more wireless sensors. The Gateway then provides the data to the cloud via MQTT.
